

The entire CoE Headquarters site including the ITC parking lot is controlled by a NYSDEC issued Site Management Plan. Environmental contaminants, including asbestos and low levels of heavy metals and hydrocarbons, have been identified in the soil and groundwater at the site as a result of historic site operations. A "Cover" consisting of NYSDEC approved impervious products, including concrete, asphalt or structures, and/or clean soil or stone, has been installed on the site at depth of not less than twelve inches and remains in place on all portions of the CoE site. A demarcation layer consisting of orange colored landscape fabric (mirafix) has also been installed on all portions of the CoE site below the "cover" to distinguish the boundary between the "cover" and pre-existing fill. Syracuse University's Environmental Health and Safety Services Office must be notified prior to any excavation on the site and will assist in ensuring the requirements of the site management plan are followed during the excavation. (Daytime Call 315-443-4132, After hours Call 315-443-1234)
